## 2.2 Front Panel I/O & Functions

In Vecow ECS-9200/9100 GTX1050 series family, all I/O connectors are located on the front panel and the rear panel. Most of the general connections to computer device, such as USB, LAN Jack, Audio, Display Port, DVI-I, DVI-D and other additional storage, are placed on the front panel.

### 2.2.1 Power Button

The Power Button is a non-latched switch with dual color LED indications. It indicates power status: S0, S3 and S5. More detail LED indications are listed as follows:

LED Color	Power Status	System Status
Solid Blue	S0	System working
Solid Orange	S3, S5	Suspend to RAM, System off with standby power

To power on the system, press the power button and then the blue LED is lightened. To power off the system, you can either command shutdown by OS operation, or just simply press the power button.

If system error, you can just press the power button for 4 seconds to shut down the machine directly. Please do note that a 4-second interval between each 2 power-on/power-off operation is necessary in normal working status. (For example, once turning off the system, you have to wait for 4 seconds to initiate another power-on operation.)

## 2.2.2 Reset Tact Switch

It is a hardware reset switch. Use this switch to reset the system without power off the system. Press the Reset Switch for a few seconds, and then reset will be enabled.

## 2.2.3 CFast Card

There is a CFast socket on the front panel supporting Type-I/II Compact Flash card. It is implemented by a SATA III Port from C236 PCH. Be sure to disconnect the power source and unscrew the CFast socket cover before installing a CFast card. ECS-9200/9100 GTX1050 does not support the CFast hot swap and PnP (Plug and Play) functions. It is necessary to remove power source first before inserting or removing the CFast card.

The pinouts of CFast port are listed as follows:

Pin No.	Description	Pin No.	Description
S1	GND	PC6	NC
S2	SATA_TXP4	PC7	GND
S3	SATA_TXN4	PC8	CFAST_LED

## 2.5 Main Board Jumper & Deep Switch Settings

### 2.5.1 Top View of ECS-9200/9100 GTX1050 Main Board With Jumper and DIP Switch

The figure below is the top view of ECS-9200/9100 GTX1050 main board which is the main board. It shows the location of the jumpers and the switches.

You may configure your card to match the needs of your application by setting jumpers. A jumper is a metal bridge used to close an electric circuit. It consists of two metal pins and a small metal clip (often protected by a plastic cover) that slides over the pins to connect them. To “close” a jumper, you connect the pins with the clip. To “open” a jumper, you remove the clip. Sometimes a jumper will have three pins, labeled 1, 2 and 3. In this case you would connect either pins 1 and 2, or 2 and 3.

You may configure your card to match the needs of your application by DIP switch. As below show the DIP switch on and off.

## 2.6.2 Ignition Control Wiring

To activate ignition control, you need to provide IGN signal via the 3-pin pluggable terminal block located in the back panel. It is below the general wiring configuration.

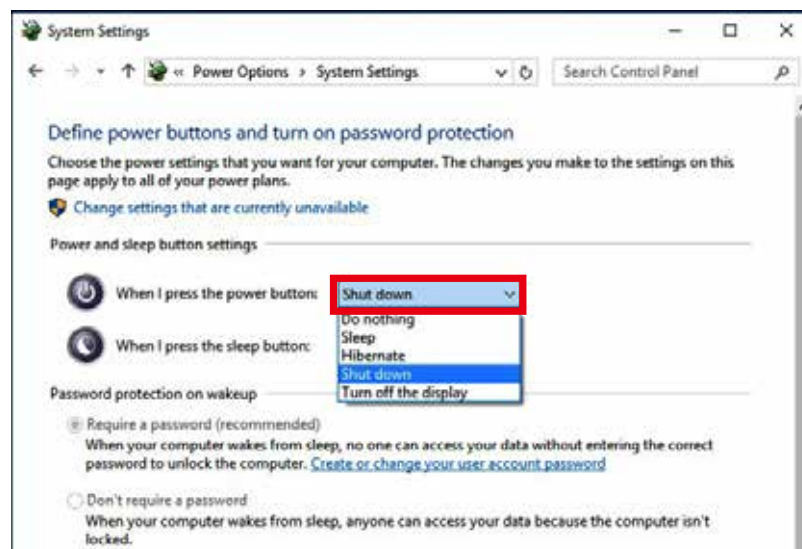

Pin No.	Definition
1	Ignition (IGN)
2	External Power S/W +
3	External Power S/W +

For testing purpose, you can refer to the picture below to simulate ignition signal input controlled by a latching switch.

Note:

1. DC power source and IGN share the same ground.
2. ECS-9200/9100 GTX1050 supports 6V~36V wide range DC power input in ATX/AT mode. In Ignition mode, the input voltage is fixed to 12V/24V for car battery scenario.
3. For proper ignition control, the power button setting should be "Power down" mode.

In Windows, for example, you need to set "When I press the power button" to "Shut down."

### 2.6.3 Smart Battery Protection

The system with “Ignition Control” can perform Smart Battery Protection, namely Low Battery Detection.

When the system is running on a battery and its voltage drops below the threshold, the system will automatically shut down. The Low Battery Detection is implemented in the ignition control MCU FW and as a default function.

Note:

Battery Voltage	Thresholds
12V	10.5~15V
24V	21.5~30V

## APPENDIX C : RAID Installation Guide

### C.1 SATA Mode for RAID

Please select SATA device to RAID mode on BIOS menu.  
Advanced → SATA Configuration → SATA Mode Selection

Main	Advanced	Chipset	Boo	Security	Save & Exit	
SATA Controller(s)					[Enabled]	Item Specific Help
SATA Model Selection					[AHCI]	

### C.2 OS Installation

ECS-9200/9100 GTX1050 is featured with six SATA, include two internal SATA, three mSATA and one CFAST.

You can select one of SATA ports for OS installation

We used CFAST card for Windows 10 OS installation as an example.

### C.3 Install Device Drivers

The instructions are as follows:

1. Install Chipset driver
2. Install Graphic driver
3. Install Network driver
4. Install ME driver (if available)
5. Install Audio driver

## C.4 Install “Intel Rapid Storage Technology” Software

You can get the software on ECS-9200/9100 GTX1050 driver CD.  
Also, you can find latest information and software directly from Intel website.

[http://www.intel.com/p/en\\_US/support/highlights/chpsts/ismm](http://www.intel.com/p/en_US/support/highlights/chpsts/ismm)

The RAID environment has been done if you completed the steps above.

## C.5 Insert SATA HDD for RAID 1

Please notice, you can use six SATA ports for SATA HDD, except for the CFast port and mSATA slot.

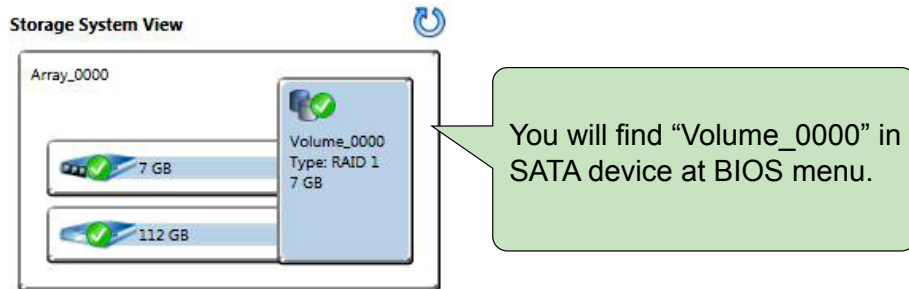

## C.6 Create RAID Volume

ECS-9200/9100 GTX1050 is featured with four SATA HDDs for RAID volume, so there are three options for choose on this page. Let’s take RAID 1 as example, please select “RAID 1”.

## C.7 Disk Management : Partition the Disk

After RAID 1 volume created, you can see the figure of SATA device allocation.

To start Disk Management tool, select "initialize disk."

Then add "Logical Device" for Windows access.

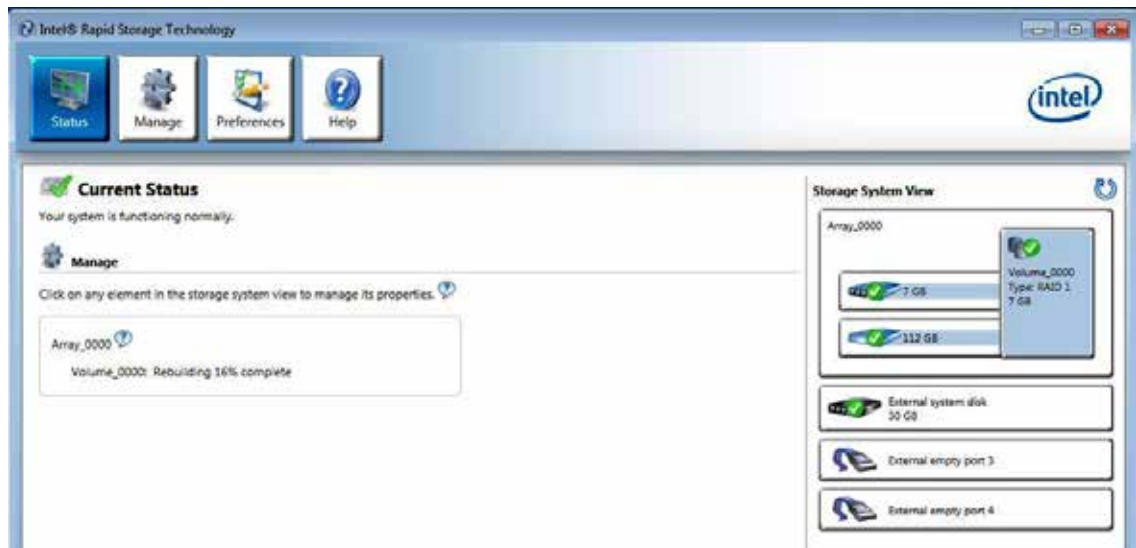

## C.8 RAID HDD Fail

After RAID 1 volume created, you can see the figure of SATA device allocation.

## C.9 Original HDD Recovery

## C.10 New HDD Recovery

There is a warning will pop-up to ask you if the disk is not a member of original RAID volume.

If you press “Rebuild”, it will replace the broken SATA HDD to the last one SATA HDD of RAID volume.
