ARDOR GAMING Le Mans

Mundarija

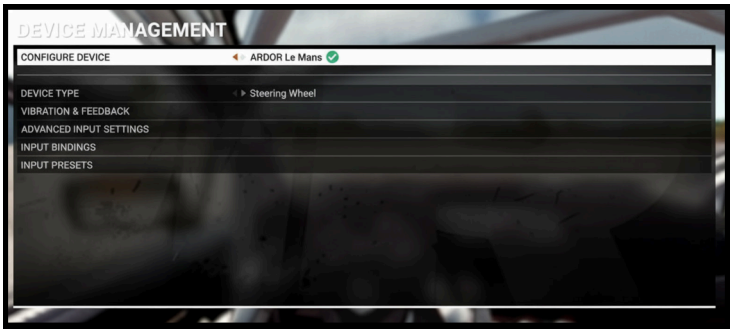

«Chayqalish»ni optimallashtirish va minimallashtirish. 5

O‘yin to‘plami

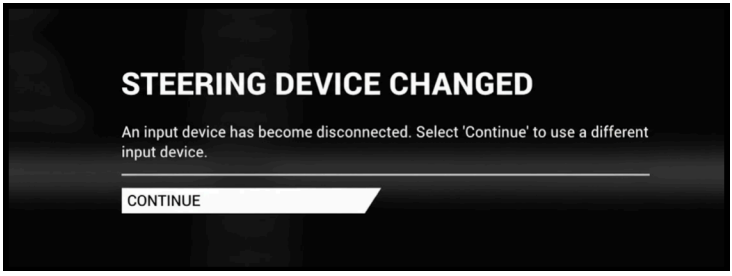

ARDOR GAMING Le Mans

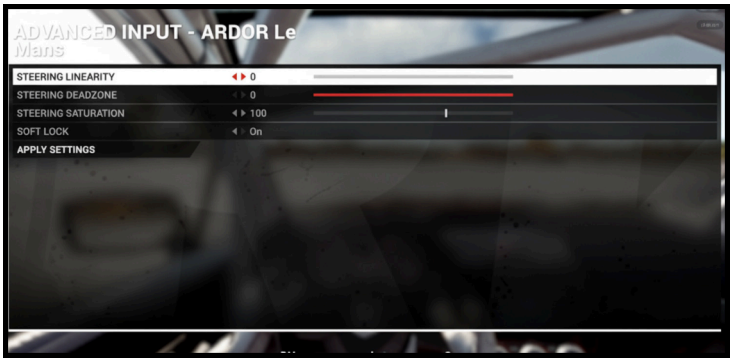

Moslikni qo‘shish

1. Sozlash bo‘limidagi Input bo‘limiga o‘ting, Device Management ni tanlang, so‘ngra Configure Device tugmasini bosing. O‘yin rulingizni tanlang va Device Type parametrini Steering Wheel deb belgilang.

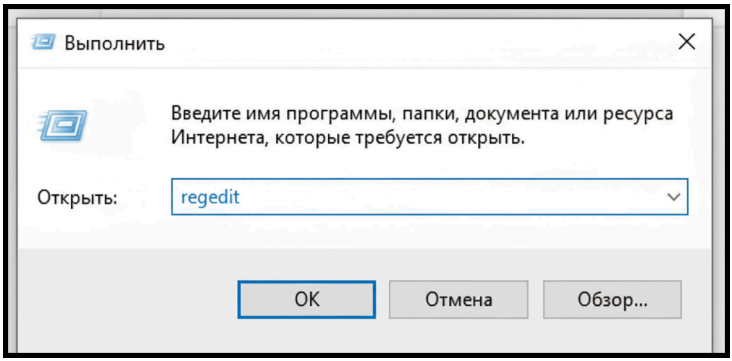

2. Input Bindings bo‘limini oching va barcha tugmalarni o‘z xohishingizga ko‘ra sozlang. Steer Left (chapga burilish) va Steer Right (o‘ngga burilish) parametrlari sozlangandan so‘ng bildirishnoma paydo bo‘ladi. Bu Advanced Input Settings menyusida chiziqlilik, o‘lik zona va to‘yinganlik kabi qo‘shimcha parametrlarni ochadi. Optimal ishlash uchun ushbu qo‘llanmada keltirilganlarga o‘xshash sozlash parametrlari tavsiya etiladi.

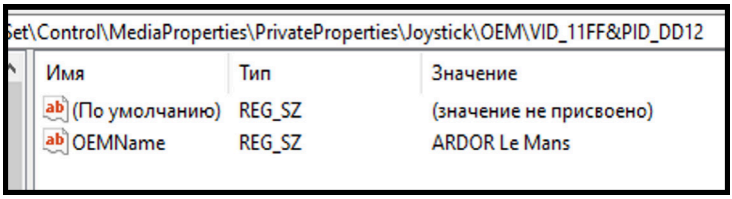

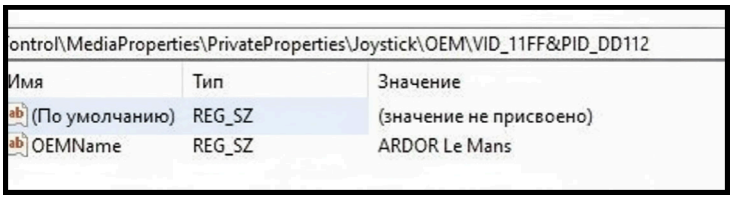

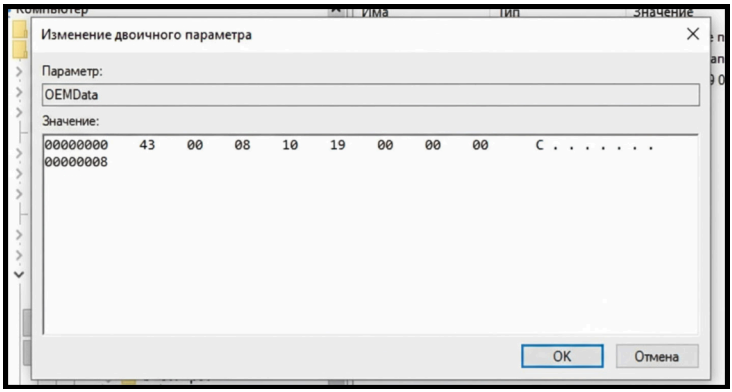

3. Parametrlarni yoping va o‘yinni ishga tushiring. Ehtimol, to‘siqlarsiz yoki yo‘l qoplamasi o‘zgarmagan holda tekis harakatlanishda teskari aloqa effekti (Force Feedback, FFB) yo‘qligini aniqlaysiz, quyidagi amallarni bajaring. FFB ni faollashtirish uchun:

- O‘yinni yoping.
- Ishga tushirish oynasini ochish uchun Win + R tugmalar birikmasini bosing, regedit buyrug‘ini kiriting va reyestr muharririni ochish uchun tasdiqlang.
- Reyestr kalitiga quyidagi yo‘l orqali o‘ting: Kompyuter\HKEY_CURRENT_USER\System\CurrentControlSet\ Control\MediaProperties\PrivateProperties\Joystick\OEM
- Rulingizga mos keladigan quyi papkani toping, masalan: Kompyuter\HKEY_CURRENT_USER\System\CurrentControlSet\Control\MediaProperties\PrivateProperties\Joystick\OEM\VID_11FF&PID_DD12
- Oynaning o‘ng qismidagi bo‘sh joyda OEMData nomli ikkilik parametr yarating (nomini o‘zgartirish mumkin).
- Ushbu parametrni oching va uni bo‘shliqlarsiz qiymatlar bilan to‘ldiring (masalan, Logitech G29 uchun): 43 00 08 10 19 00 00 00.
- Zarur bo‘lganda boshqa rul qurilmasining kodidan foydalaning (masalan, Moza R5 uchun): 43 00 88 01 FE 00 00 00.
- O‘yinni qayta ishga tushiring. O‘yin parametrlarini qayta sozlamasdan teskari aloqa effekti (FFB) paydo bo‘lganini sezishingiz kerak, biroq neytral holatda rulning «chayqalishi» paydo bo‘lishi mumkin.

«Chayqalish»ni optimallashtirish va minimallashtirish

1. O‘yin va dasturiy ta’minot sozlamalarida FFB parametrlari yuqori bo‘lganda yuzaga keladigan rulning «chayqalishi»ni butunlay yo‘qotib bo‘lmaydi, ammo uni sezilarli darajada kamaytirish mumkin.
2. «Chayqalish»ni minimallashtirish uchun quyidagilarni bajaring:
   - Sozlash bo‘limiga, so‘ngra Input ga o‘ting, Device Management ga kiring, o‘yin rulingizni tanlang va Vibration & FEEDBACK bo‘limini oching.
   - Birinchi surgichni “chayqalish” kamayadigan, ammo FFB ning maksimal qismi saqlanib qoladigan tarzda rostlang. Tavsiya etilgan qiymat – taxminan 40-45 (kam emas).
   - Racing Wheel mobil ilovasida rulga ulaning va quyidagi parametrlarni sozlang:
     - Maksimal tezlik («chayqalish»ga sezilarli darajada ta’sir qiladi).
     - Dempferlash (o‘rtacha qiymat).
     - Teskari aloqa kuchi (o‘zingiz uchun qulay qiymatni tanlang).

Qurilmadagi yozuvlar: “СИЛА ОБРАТНОЙ СВЯЗИ” — Teskari aloqa kuchi; “ДЕМПФИРОВАНИЕ” — Dempferlash
